

1. Preparation for wound healing and prevention of adhesion to the wound characterized by the content of a physiologically acceptable salt of hyaluronic acid having molecular weight from 200 000 to 2 500 000, iodine and potassium iodine.

2. Preparation of claim 1 characterized in that said physiologically acceptable salt of hyaluronic acid is selected from a group containing sodium salt, potassium salt, lithium salt, calcium salt, magnesium salt, zinc salt, cobalt salt and manganese salt or a combination thereof.

3. Preparation of claim 1 characterized in that the concentration of the physiologically acceptable salt of hyaluronic acid is in the range from 0,05 to 10,0 % by weight, the concentration of iodine is in the range from 0,05 to 2,5 % by weight, and the concentration of potassium iodine is in the range from 0,05 to 5% by weight.

4. Preparation of claim 3 characterized in that wherein the concentration of the physiologically acceptable salt of hyaluronic acid is in the range from 0,05 to 10,0% by weight, the concentration of iodine is in the range from 0,075 to 1% by weight, and the concentration of potassium iodine is in the range from 0,075 to 1% by weight.

5. Preparation according to claim 1 characterized by being in the form of a sterile aqueous solution or a gel.
